

**WINTERTHUR**  
TECHNOLOGY GROUP

## Quality

to meet the customer's exacting demands for state-of-the-art abrasive tools.

## Environmental protection

to preserve the environment for future generations.

## Responsibility

towards customers, employees and nature – for our common future.

# Quality obliges

Certified  
ISO 9001  
ISO 14001

04.02.2004/Gs

# Corporate philosophy

Since the foundation of our company in 1876, we have concentrated on making high quality products.

Whenever international quality standards were introduced it has been a matter of course for our company to adopt and integrate these into our daily activities.

As the term quality nowadays incorporates diverse issues, among others, manufacturing processes, the environment, design, customer

satisfaction, our corporate quality thinking governs all of these aspects.

From product development to the procurement of raw materials, manufacturing processes and customer support, we apply the most exacting standards.

The seal of approval given us by internationally recognized and renowned certification bodies assures us, and our customers, that

all required norms and standards are followed and adhered to.

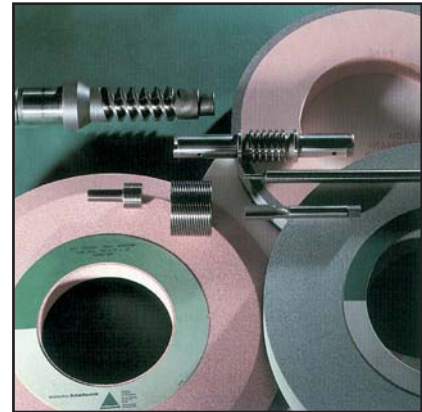

We are deeply satisfied that many of our customers recognize our commitment to quality by honouring us as their preferred supplier.

By consistently implementing our corporate quality policy, we are proud to note that, within our industry, we were among the first to introduce the quality management systems described in

## Quality

### means to us

- Safety and reliability of our products for the end user.
  - Customer satisfaction
  - Integration with our suppliers, customers and employees
  - Simple processing channels and clearly defined responsibilities
  - High level of process control and capability
  - Critical evaluation of our processes and products leading to
  - continuous improvement in all areas
- A combination of
- Experience and competence coupled with
  - Openness and willingness to change

Plunge grinding and longitudinal grinding with single and multi-rib wheels for grinding ball screws, threads and drive worms

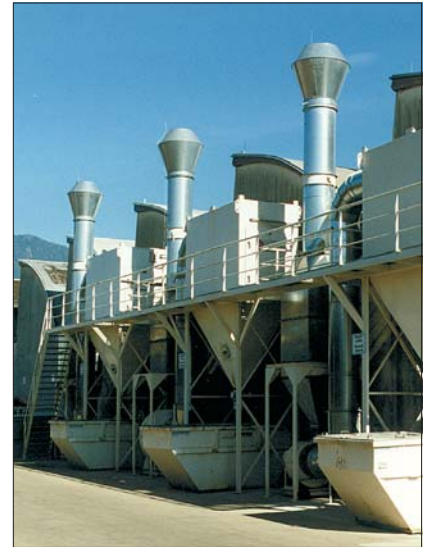

### Certified according to

Name	Edition	Remarks
EN/ISO 9001	2000	International quality management system

# Environment/operation safety

## Environmental protection and operation safety mean to take responsibility

- To preserve the environment for future generations.
- To take into account the environmental friendliness of new products during development, and also during the planning of new production processes
- To responsibly handle raw materials and to use all energy resources economically
- To continually supervise all environmentally relevant processes
- To disclose and make public all relevant environmental data
- To cooperate with the public
- To establish ergonomically designed workplaces
- To actively promote health and safety at work
- To use pollution free raw materials and finished products
- To work out safe solutions for waste disposal
- Ergonomic work station
- Reduction of dangerous raw materials

Dry filter units for dust extraction. The extracted materials can be reutilized.

## Certified according to

Name	Edition	Remarks
EN/ISO 14001	2004	International environmental management system

# Responsibility and motivation

The level of compliance with legal standards to date far exceeds the legal minimum requirements. The success that goes with the reaching this level adds impetus and motivation and obligation to continue on the chosen path. Out of respect for our employees, customers and the environment, we will continue to critically evaluate our corporate goals, products and activities. Our technical know-how makes us a qualified partner for our customers. Honesty and openness allow us to develop continuously at a personal, technical and corporate level. This, we believe, is a valuable contribution for tomorrow's world.

... for our children
